## ENERGY AUTHORITY OF SURINAME

The Energy Authority Suriname (EAS) is the independent, supervisory and steering body in the energy sector that regulates, monitors, informs and advises. Energy security and sustainability can also be considered important starting points in this sense. The EAS became operational in the fourth quarter of 2020.

## CORE VALUES

### THE CORE VALUES OF THE EAS

Core values form the basis for the desired corporate culture. They act as the basis for organizational behavior and decisions and provide consistent direction for all employees. In this context, core company values are defined as clearly formulated principles. The goal is to align everyone within the organization around a guiding philosophy aimed at serving employees, stakeholders and the wider community. Together with its employees, the management has established three (3) core values on which it wants to focus and build its culture in the coming years:

#### TRANSPARENT

#### OBJECTIVITY

#### PROFESSIONALITY

## THE ENERGY SECTOR

### EAS AND THE ENERGY SECTOR

The promulgation of the Energy Authority of Suriname Act and the 2016 Electricity Act were the first steps in the process of restructuring the energy sector. The Electricity Act determined three objectives to improve the performance and sustainability in the sector. The first is to improve the availability of electricity, the second is to ensure affordability of supply and the third focuses on increasing environmental quality and sustainability. The Energy Authority of Suriname (EAS), aims to work closely together with stakeholders in the energy sector, in order to discuss energy related issues and work together on effective solutions.

### VISION

The EAS, our independent regulator. Leading in the development of a reliable, accessible and sustainable energy sector.

### THE ELECTRICITY SECTOR PLAN

The Electricity Sector Plan (ESP) covers the most crucial elements of the reform in the energy sector and is prepared every 5 years and issued by government decree. Together with the various stakeholders in the sector, the ESP is being developed to structurally tackle various issues and achieve effective results. By working together on structural solutions, energy security and sustainability can be guaranteed.

### MISSION

We create conditions for an efficient sector, monitor compliance with laws and regulations and promote synergy between the government, energy companies and customers. Our approach is characterized by transparency, professionalism and objectivity and we strive for the highest standards in the sector.
